Dear Kristine,

ESTEIA is following the guidelines of EUMETNET OPERA programme (OPERA_2010_05 - https://www.eumetnet.eu/wp-content/uploads/2017/01/OPERA_2010_05_Wind_turbines-1.pdf) which states that:

1. no wind turbine should be deployed at a range from radar antenna closer than 5 kilometers for C-band radars.
2. projects of wind parks should be submitted to an impact study when they concern ranges closer than 20 kilometers for C-band radars

The circles are nominal and maximum range and are just for information.

Best regards,
 Juhan Hinnov
 EstEA

Subject: About Estonian meteorological radars located near the Latvian-Estonian border

Dear, Juhan!

You responded to our letter with an e-mail that included a map and plan of your new radar network. We really appreciate your sharing of information.

As is well-known, Estonia has made significant progress in the development of renewable energy sources; therefore, we presume you have already established some standards or restrictions for large-scale wind farms.

Regarding your map, I wanted to know if there are any restrictions within the blue or red circles that we, as responsible developers, should be aware of.

In attachment I added your map.

Best regards,
 Kristīne Eglīte

Cienā
